

THE KENNEL CLUB

ACCREDITED BREEDER SCHEME

BREED-SPECIFIC REQUIREMENTS AND RECOMMENDATIONS INCLUDING HEALTH SCREENING

IMPORTANT POINTS

This list is subject to change and a link to the most up-to-date version may be found on the Kennel Club website at <http://www.thekennelclub.org.uk/item/474>

At this stage, requirements have been restricted to tests where an official Kennel Club scheme is in operation. This is essential for automated checks performed at the time of litter registration on both sire and dam. Recommendations, however, may not be related to official schemes. There will be no formal checks on breeder compliance with recommendations although breeders will be encouraged to follow recommendations for their breed and we will ask them to send copies of screening results that are unavailable on our registration database. An important result of setting out health screening recommendations will be to raise the profile of existing breed club schemes.

Any breed that does not appear in the list currently has no health screening requirements or recommendations under the Accredited Breeder Scheme.

KEY TO OFFICIAL HEALTH SCREENING SCHEMES, DNA TESTS, BREED CLUB AND OTHER SCHEMES

- a) Hip scoring – should be done under the KC/BVA Hip Dysplasia Scheme.
- b) Elbow grading - should be done under the KC/BVA Elbow Dysplasia Scheme.
- c) Eye testing – should be done under the KC/BVA/ISDS Eye Scheme or the KC/AHT Scheme or the ECVO Scheme. (Eye examinations should be repeated annually and should be within 18 months of the date of registration of a litter). Gonioscopy is a separate eye test (for predisposition to glaucoma) and, where relevant, this test is only done once.
- d) DNA tests – there are various official DNA testing schemes depending on the condition concerned. The conditions that are currently included are: CEA (collie eye anomaly); CLAD (canine leucocyte adhesion deficiency); CSNB (congenital stationary night blindness); CT (copper toxicosis); Fuco (fucosidosis); PRA (progressive retinal atrophy); L2-HGA (L2-hydroxyglutaric aciduria); vWD (von Willebrand disease).
- e) BAER testing (deafness) – BAER stands for brainstem auditory evoked response. There are a number of centres in the UK that offer BAER testing.
- f) Breed Club Schemes – Wherever a 'Breed Club' test is recommended, this is because a breed club or clubs for that breed have asked for the relevant health check to be included under the Accredited Breeder Scheme. Queries should be directed to the breed club(s) or Council concerned. Current contact details for all breed club secretaries are listed on the Kennel Club website www.thekennelclub.org.uk
