Working

Siberian Husky

The lightest and fastest of the sled dogs, the Siberian Husky originates in the Northeast of Siberia and was known also as the Chukchi sled dog after the tribe of Eskimos who used the breed for long distance sled hauling. The extreme and remote location meant that breeding was kept undiluted for centuries as the Chukchi castrated all but the best 'lead dogs' and since the dogs lived alongside the families, they were bred selectively for working abilities and temperament.

By the early 20th Century the Siberian Husky had established itself as supreme in the world of sled racing and they have been part of many famous expeditions. In 1925 a team of Siberians came to the rescue of Nome, a town in Alaska that was suffering a major diphtheria epidemic. A relay of Husky teams transported the life-saving serum hundreds of miles. A statue commemorating the achievement of the dogs is located in Central Park, New York.

Breed Group	Working
Vulnerable Breed	No
Size	Medium
How much exercise?	More than 2 hours per day
Length of coat	Short
How much grooming?	More than once a week
Supposedly sheds?	Yes
Town or Country	Country
Type of home	Large House
Minimum garden size	Large
Lifespan	Over 10 Years

Health Information

You may be aware that some breeds of dog and their crosses can be susceptible to inherited disease. Of course you want to be sure that the dog you choose is as healthy as possible, and you would like to know that it has not inherited any undesirable disease-causing genes from its parents. There is some help in that DNA tests for diseases in purebred dogs are available for some conditions in some breeds, but there are not very many such tests just yet! There are also, however, a number of clinical veterinary screening schemes that dog breeders can use to increase the probability of producing healthy puppies.

Details of the various screening schemes, both veterinary and DNA, that are available to breeders in the UK can be found at www.thekennelclub.org.uk/doghealth

Potential dog owners should be aware that, at present, the application of various health screening results to breeding programmes is not always straightforward, and breeders may make choices for various reasons. A responsible breeder though, will always be willing to discuss relevant health issues with you. Breed clubs are often useful sources of breed-specific information.

What Screening is relevant for the Siberian Husky?

Kennel Club Assured Breeders must use the following screening schemes for sires and dams BVA/KC

- BVA/KC Hip Dysplasia Scheme
- BVA/KC/ISDS Gonioscopy
- Eye testing

Kennel Club Assured Breeders are strongly recommended to use the following screening schemes and/or advice for sires and dams

- Breed Club - Eye testing

The list above is not necessarily comprehensive. Breed clubs and experienced breeders are useful sources of information on health issues in the breed. All breeds have a Breed Health Coordinator.
