

Bull Terrier (Miniature)

Although small Bull Terriers had been known in 19th century, the Miniature Bull Terrier was first recognised as a separate variety in 1943.

The miniaturisation was developed through the breeding together of smaller specimens of the Bull Terrier, the challenge for breeders being the difficulty in getting the head type, substance and soundness of dogs of smaller frame – preferably under 35.5 cms (14ins).

What health screening is currently relevant?

Kennel Club Accredited Breeders must use, or are strongly recommended to use, the following screening schemes and/or advice for sires and dams:

- **DNA test - PLL**
Primary Lens Luxation (PLL) AHT
www.aht.org.uk
- **Breed Club - Heart test**
- **Breed Club - Kidney test**
- **Eye testing**
