Tibetan Mastiff

This is the largest of the Tibetan breeds, and is regarded by some as one of the world's most ancient breeds, and as the ancestor of all the mastiff breeds. Bred in the Himalayan region to protect homestead and livestock, the Tibetan Mastiffs were often tethered at the entrance of the property to deter intruders. Early British explorers in the Himalayas spoke of the giant breed, with its great substance and its dense protective coat. In 1828 King George IV presented a Tibetan Mastiff to the London Zoo.

The Chinese invasion of Tibet in 1950 brought the compulsory slaughtering of dogs and only a few Tibetan Mastiffs living in remote areas escaped. It was this stock which formed the foundation of the modern breed.

Breed Group	Working
Vulnerable Breed	No
Size	Large
How much exercise?	Up to 1 hour per day
Length of coat	Medium
How much grooming?	More than once a week
Supposedly sheds?	Yes
Town or Country	Either
Type of home	Large House
Minimum garden size	Small/Medium
Lifespan	Over 10 Years

Health Information

You may be aware that some breeds of dog and their crosses can be susceptible to inherited disease. Of course you want to be sure that the dog you choose is as healthy as possible, and you would like to know that it has not inherited any undesirable disease-causing genes from its parents. There is some help in that DNA tests for diseases in purebred dogs are available for some conditions in some breeds, but there are not very many such tests just yet! There are also, however, a number of clinical veterinary screening schemes that dog breeders can use to increase the probability of producing healthy puppies.

Details of the various screening schemes, both veterinary and DNA, that are available to breeders in the UK can be found at www.thekennelclub.org.uk/doghealth

Potential dog owners should be aware that, at present, the application of various health screening results to breeding programmes is not always straightforward, and breeders may make choices for various reasons. A responsible breeder though, will always be willing to discuss relevant health issues with you. Breed clubs are often useful sources of breed-specific information.

What Screening is relevant for the Tibetan Mastiff?

Kennel Club Assured Breeders must use the following screening schemes for sires and dams BVA/KC

- BVA/KC Hip Dysplasia Scheme

Kennel Club Assured Breeders are strongly recommended to use the following screening schemes and/or advice for sires and dams

- BVA/KC Elbow Dysplasia Scheme

The list above is not necessarily comprehensive. Breed clubs and experienced breeders are useful sources of information on health issues in the breed. All breeds have a Breed Health Coordinator.
