

Bendikes Edward Bear At Squiresbeach

THE KENNEL CLUB
Making a difference for dogs

Breed Glen Of Imaal Terrier
Sex Dog
Colour Blue Brindle

Health Tests

DNA

There are DNA tests available for specific conditions in some breeds. A result or status will show only if the dog has been DNA tested or is hereditarily clear of the condition for which there is a DNA test.

DNA tests can show whether an individual dog is genetically clear (no copies of the disease gene), a carrier (one copy of the disease gene) or affected (two copies of the disease gene) for a particular condition or disease. This is very useful information for breeders, and breeding advice will vary according to the disease/condition in question.

Test	Result/Status	Date	Age
PRA (crd3)	Hereditary Clear	17th February 2012	-

PRA (crd3)	Progressive retinal atrophy - crd3
------------	------------------------------------

For more information on Screening schemes and to get an idea of screening currently relevant to this breed, please see the Assured Breeder Scheme - Breed Specific Requirements and Recommendations at www.thekennelclub.org.uk
